

*Come join me in a  
journey through  
the body as  
Fettuccine Alfredo*

*By Leam Bilik

4/16/21*

***Hi I'm Joey the Fettuccine. Today I will be taking you on a journey through the digestive system. We will enter the mouth and start the tour. The tour will take about 10-13 hours and we will exit from the Anus.***

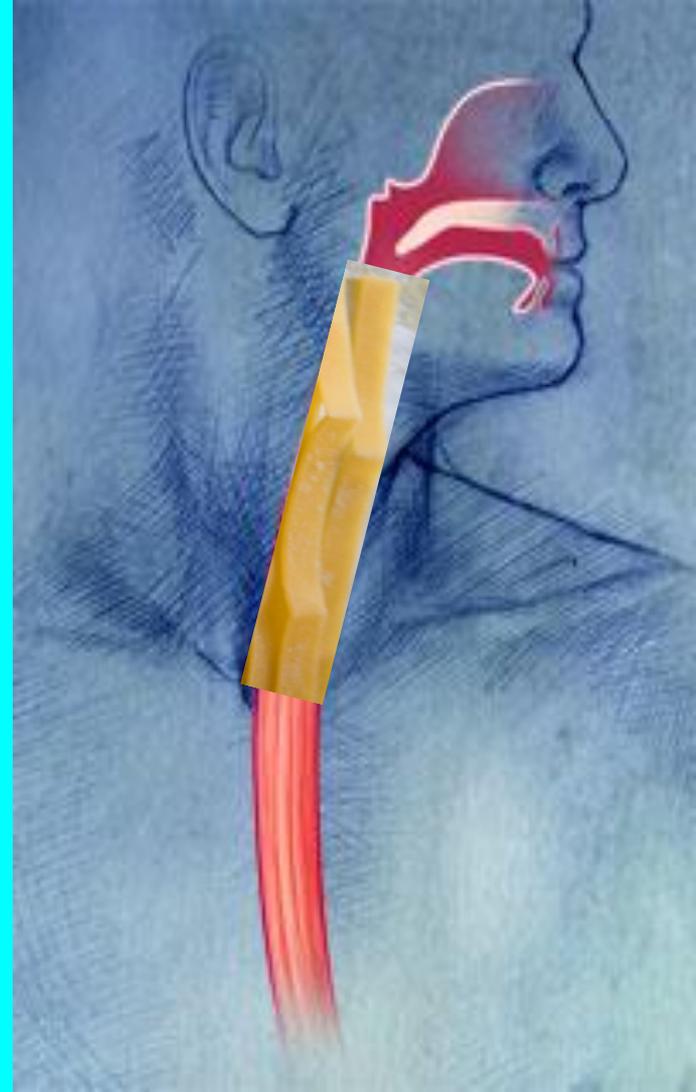

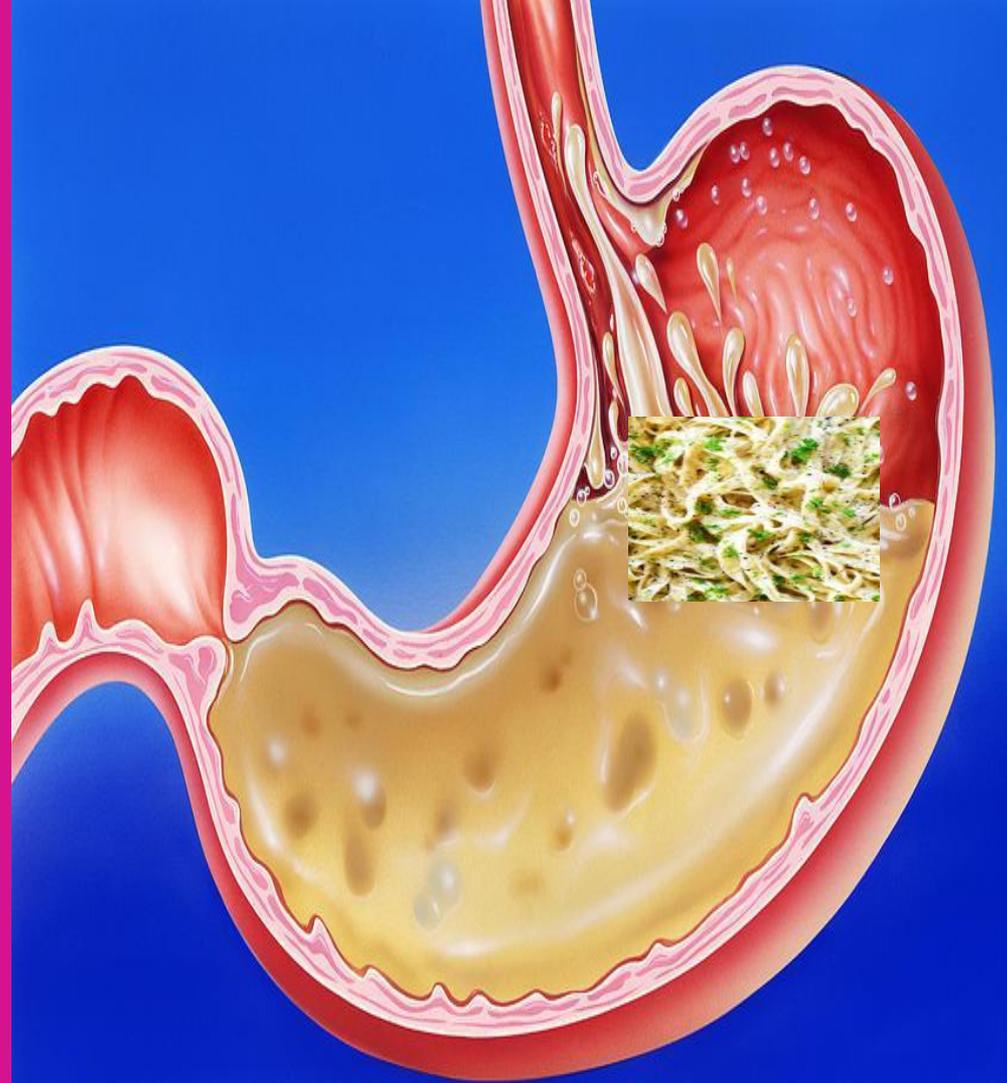

***I'm on a black plate right now and I'm being served for dinner. Now I'm going in Leam's mouth hopefully he thinks I'm bussin.***

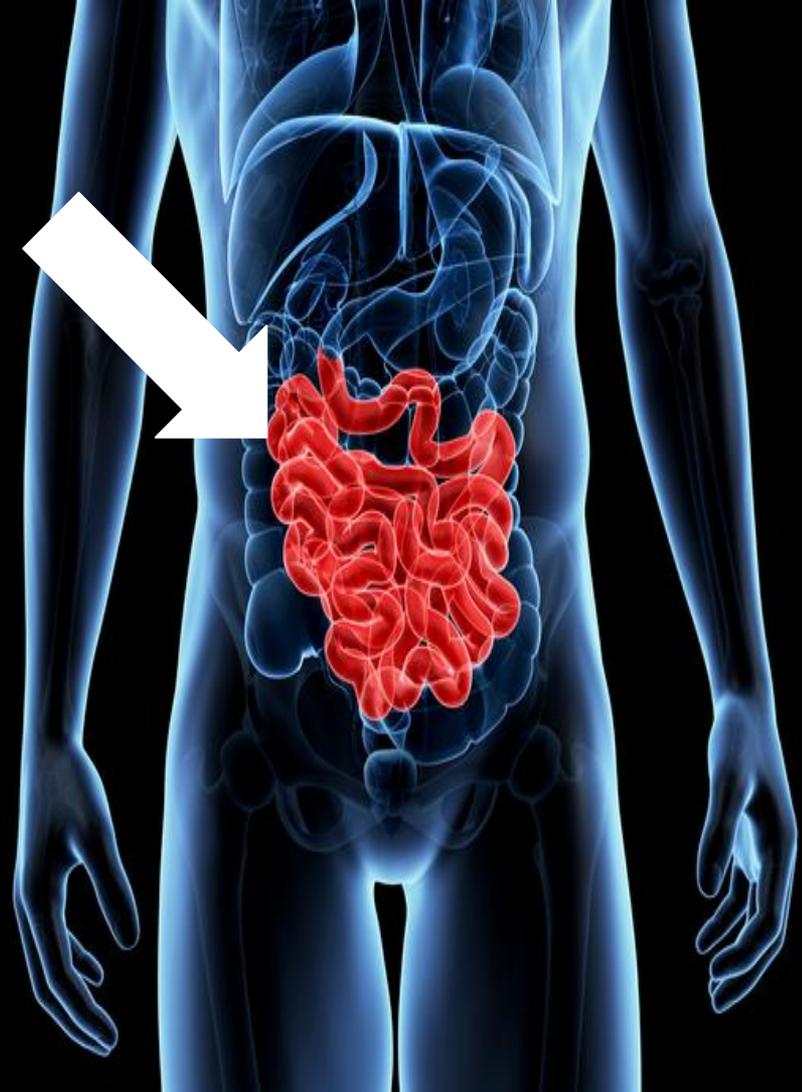

***We are now going down a big scary pink hole scary!!!! We are in the esophagus where we will be crushed into tiny pieces by muscle contractions which is called peristalsis.***

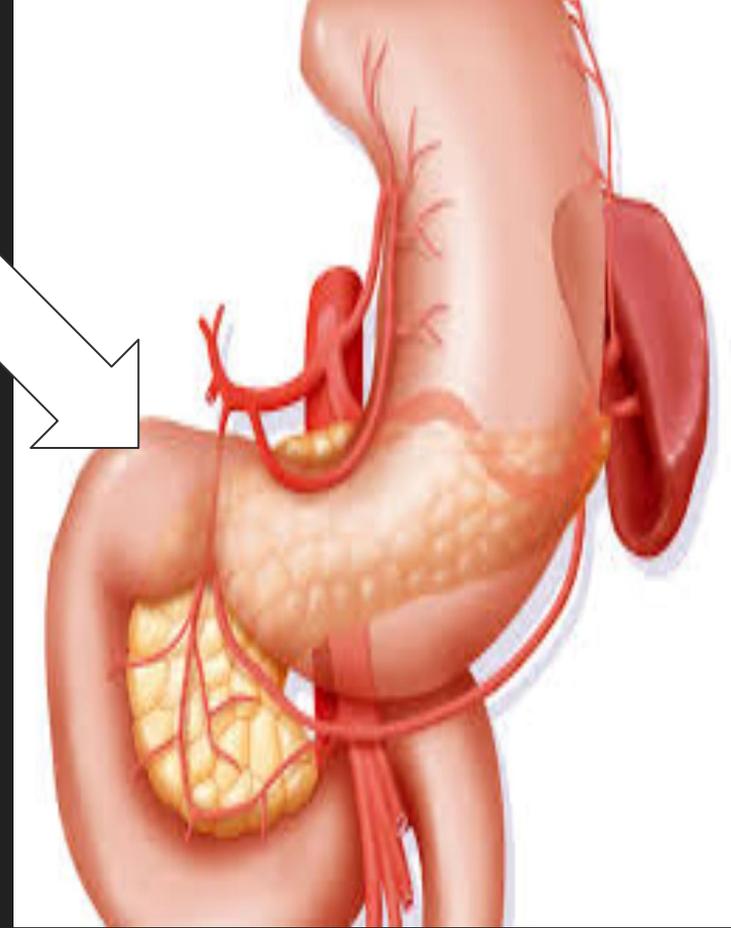

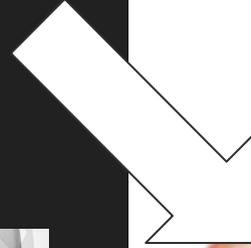

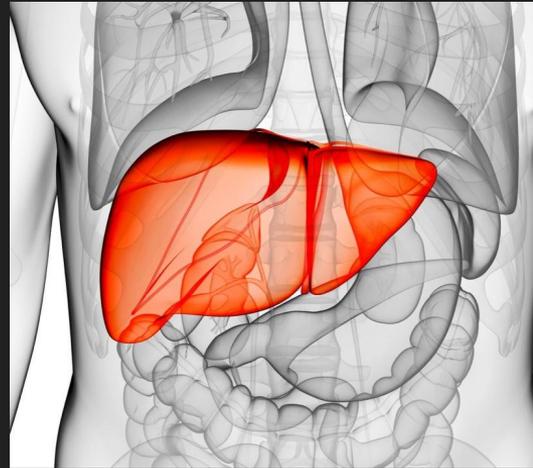

***We are now falling down a hole, it feels like we're turning into a watery liquid called chyme. We're getting crushed by peristalsis ahhh run!!! There is so much Juice and enzymes were going to slip.***

***We are going into the small intestine. In the small intestine there is an army that it uses to get the job done. One of the soldiers is called the Gallbladder.. it stores bile and helps break down fat. The next powerful soldier is the pancreas. It makes digestive enzymes and helps regulate blood sugar.***

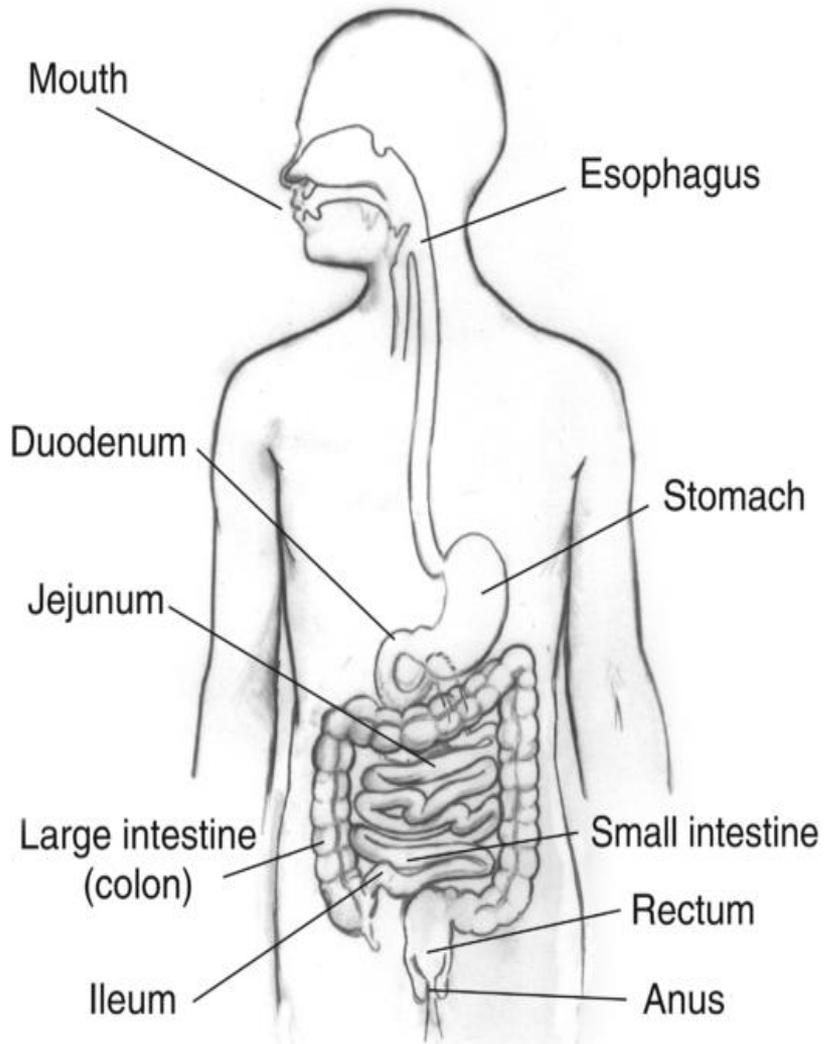

***We arrived to the duodenum of the first part of small intestine. We're gonna get squirted by bile. Food doesn't go throw the liver or gallbladder although the liver produces bile. The gallbladder stores bile which is released into the small intestine which helps break down fat.***

***We arrived to the large tube I think it is called the large intestine. In the large intestine we will turn into waste. The waste stays in the large intestine for up to three days. After this we will go to the rectum and anus.***

***Finally we are almost out of the digestive system we are at the rectum and anus. When we are in the rectum we will turn into waste. The rectum makes it easier to help the waste get out of the anus***

***Finally we are out of Leam's digestive system. Now are in the toilet. We will get flushed down the toilet and be headed towards the sewers. That journey through the digestive system was very fun.***
